EXP.NO:	1	BASIC LINUX COMMANDS
DATE:		

AIM

To study and practice the basic Unix/Linux commands for file management, navigation, permissions, process management, and text processing.

PROCEDURE

1. Open the Linux terminal.
2. Type each command as listed below and observe the output.
3. Record the output in the terminal-style output section.

COMMANDS AND DESCRIPTION

Command	Description
ls -l	Long format listing of files
pwd	Print working directory
mkdir mydir	Create a directory named mydir
touch file1.txt	Create an empty file
cd mydir	Change to mydir directory
ls -a	Show all files including hidden
cat file1.txt	Display content of file
cp file1.txt file2.txt	Copy file1 to file2
mv file2.txt renamed.txt	Rename file2 to renamed
chmod 777 file1.txt	Give full permissions to file
wc -l file1.txt	Count lines in file
grep 'hello' file1.txt	Search pattern in file
ps -ef	List all running processes
kill PID	Kill process by PID
df -h	Show disk usage in human readable format

OUTPUT

```
$ ls -l
total 20
-rw-r--r-- 1 user user  120 Apr 10 09:10 file1.txt
-rwxr-xr-x 1 user user 8192 Apr 10 09:12 program
drwxr-xr-x 2 user user 4096 Apr 10 09:00 mydir

$ pwd
/home/user/lab

$ mkdir mydir
$ touch file1.txt
$ cd mydir
$ ls -a
```

```
.  ..  file1.txt

$ cat file1.txt
Hello Linux

$ cp file1.txt file2.txt
$ mv file2.txt renamed.txt
$ chmod 777 file1.txt
$ ls -l file1.txt
-rwxrwxrwx 1 user user 12 Apr 10 09:10 file1.txt

$ wc -l file1.txt
1 file1.txt

$ grep 'Hello' file1.txt
Hello Linux

$ ps -ef | head -5
UID        PID  PPID  C STIME TTY          TIME CMD
root         1     0  0 09:00 ?        00:00:02 /sbin/init
user      1024   998  0 09:05 pts/0    00:00:00 bash

$ df -h
Filesystem      Size  Used Avail Use% Mounted on
/dev/sda1        20G   8G   11G  42% /
```

RESULT

The basic Unix/Linux commands were studied and executed successfully. The outputs confirm correct behavior of file management, permission, and process commands
